Do you have an idea to improve the health and welfare of laboratory animals?

Apply for the GLAS program.

Why GLAS?
• This program contributes to the AALAS mission to advance responsible laboratory animal care and use to benefit people and animals.
• The AALAS Scientific Advisory Committee oversees the GLAS program and selects the applications to be funded each year.

What funding is available?
• Standard Grant – Offering up to $50,000 for studies with a sound hypothesis and preliminary data.
• Small Grant – Offering up to $7,500 for innovative or pilot studies.

Who can apply?
• Applicants may be any AALAS member experienced with the care and use of laboratory animals, independent of their education or scientific background. Collaboration with the broader scientific community is encouraged, and co-investigators are exempt from the AALAS membership requirement.

What are the publication and presentation requirements if I am selected?
• AALAS requests that recipients disseminate the knowledge obtained from their funded study by submitting an abstract for presentation at an AALAS National Meeting and publishing the results in a scientific journal.
